HOW IT WORKS

Email Verification
RingLead checks email addresses in batch or in real time to make sure that all email addresses and related domains are verified and not associated with suspicious networks.

Phone Verification
RingLead validates phone numbers on new and existing records to make sure they are correctly formatted. Then, we verify that the number is active and not disconnected.

Address Verification
RingLead validates postal addresses to ensure all fields (ZIP Code, State, Street, etc) are correctly formatted and verifies that the address is real.

Easy Install and Integration
Simply upload lists to RingLead's secure platform or configure APIs that plug right into your CRM or MAP for contact data you can trust every time.

KEY BENEFITS

- Stronger communication channels
- Higher ROI on digital marketing campaigns
- Correct errors and typos
- Better customer experiences
- Less time/money wasted contacting leads with bad data

- Eliminate hard email bounces
- Avoid spam traps and wrong numbers
- Increase deliverability of your messages
- Improve sender score
- Regain confidence in your data
- Save time manually verifying phone numbers, emails, and addresses
